Henry Jake Balbiran

GHL & AI AUTOMATION SPECIALIST · 5+ YEARS IN GOHIGHLEVEL

hbalbiran@gmail.com
WhatsApp +63 918 537 9969
Davao City, PH · works US / AU hours

GoHighLevel systems that keep leads moving.

I build and improve GHL workflows, CRM pipelines and follow-up systems for agencies and service businesses, and connect them with n8n, Notion AI agents and small tools I build with AI-assisted coding. Documented handoff included.

SELECTED WORK · CLIENT WORK, ANONYMISED

GHL AUTOMATION · AUSTRALIAN RETAIL-MEDIA CONSULTANCY

Website enquiry intake with consent and routing

CLIENT WORK · ANONYMISED

PROBLEM	Website enquiries arrived as plain emails, with no record of the source or of marketing consent, and every enquiry got the same reply.
BUILT	One webhook for every site form; the contact is created with source, cohort and consent tags; a four-branch interest router sends the matching branded reply and gives the owner an email, a Google Chat alert and a reply task. Plus a survey workflow and a sales pipeline.
TOOLS	GoHighLevel workflows, tags, custom fields, email templates, pipelines; n8n for the Chat alert.
PROOF	6 anonymised screenshots and a walkthrough preview on the portfolio site.
RESULT	Live since 23 Oct 2026. Lead numbers: not measured yet.

N8N + NOTION + CLAUDE · SAME CLIENT

Meeting-to-task operating backend

CLIENT WORK · ANONYMISED

PROBLEM	Meeting notes were never turned into tasks, and the first AI setup ran out of its 300 monthly Notion AI credits in 5 days.
BUILT	10 live n8n workflows: calendar to meeting pages, notes capture, Claude follow-up drafts, at most 5 Claude-suggested tasks per meeting held for human review, email to task, a self-updating hub, failure alerts and a spend watch. Plus a handover pack of 8 runbooks.
TOOLS	n8n, Notion, the Claude API, Google Drive and Gmail.
PROOF	18 anonymised n8n and Notion screenshots with a status on each.
RESULT	Measured Claude cost: US$0.0044 per meeting for task suggestions. Time saved: not measured.

GHL AUTOMATION · AUSTRALIAN PAYMENTS RESELLER

Application tracking for a payments reseller

CLIENT WORK · ANONYMISED

PROBLEM	Applications sat with the payment provider for weeks with no one chasing the missing step, and links expired unnoticed.
BUILT	A dedicated applications board, an AI-built intake workflow, four stage-reminder workflows in business hours, expiry alerts on day 25, 30 and 38 from the link date, commission tagging and a Monday report.
TOOLS	GoHighLevel pipelines, custom fields, workflows (Build using AI), Wait until date, scheduled reports, CSV import.
PROOF	6 anonymised screenshots; every test record checked by reading it back through the API.
RESULT	Not measured yet: built and tested, awaiting go-live. The Monday report runs internally.

SKILLS BY DEPTH

GoHighLevel automation · CORE
Workflows and troubleshooting, email/SMS follow-up, pipelines, contact clean-up and migrations, funnels and forms, payment-triggered workflows, JavaScript Custom Code, APIs and webhooks, chatbots and Voice AI.

n8n · APPLIED
Meeting-note capture, task extraction for human review, follow-up drafts for approval, Notion API connections, error workflows and spend alerts.

Notion · APPLIED
Company hubs; task, project and meeting databases; self-updating status boxes; how-to pages.

Claude / AI agents · APPLIED
Claude API steps with structured output, a Notion AI agent for weekly reviews, GHL chatbot and Voice AI agents. Human review before anything is sent.

AI-assisted coding · APPLIED TO SMALL TOOLS
FlowSnap (Chrome extension, 88-check smoke test), Perator (Android app, 323 tests), the portfolio site and 3 demos, my Knowledge OS agent system.

Process & handoff · SUPPORTING
Process mapping and system diagrams, staged testing with test contacts, runbooks, SOPs, handoff docs and walkthrough videos.
